

Course aim

The course describes the Flexible Use of Airspace concept as a way of increasing airspace capacity, and explains the military/civil coordination concerning airspace allocations. The course also explains the three different levels of airspace management and tools that are used.

Course structure and content in brief

We can deliver this course on three different levels: 'introductory', 'intermediate', and 'advanced'.

- The introductory course is 1 day in duration and covers the topics mentioned under 'course aim'.
- The intermediate course is 1 day in duration and covers all topics mentioned under 'course aim' as well as the military perspective.
- The advanced version of the course is 2 days in duration. This course covers all topics mentioned under 'course aim', as well as the military perspective and a study visit.

Please discuss with us which version of the course suits your training needs.

Prerequisites

Participants need to have an ATC Background.
